Midterm Activity # 3 - Basic ATM System

```
import java.util.Scanner;

public class ATM_Biaco {
  public static void main (String [] args) {
      Scanner input = new Scanner (System.in);

      double balance = 8000;
      int choice;
      int transactions = 0;

      while (true) {
          System.out.println (" ATM MENU ");
          System.out.println (" 1. Check Balance ");
          System.out.println ("2. Deposit");
          System.out.println ("3. Withdraw");
          System.out.println ("4. Exit");
          System.out.print (" Enter your desired transaction: ");
          choice = input.nextInt();

      switch (choice) {
          case 1:
              System.out.println (" Current Balance : " + balance);
              transactions ++;
              break;
          case 2:
              System.out.print " Enter deposit amount: ");
```

```
        double deposit = input.nextDouble();
        balance += deposit;
        System.out.println("New balance: " + balance);
        transaction++;
        break;
    case 3:
        System.out.print("Enter withdrawal amount: ");
        double withdraw = input.nextDouble();

        if (withdraw > 2,000) {
            System.out.println("Error: Exceeds max withdrawal of 2000: ");
        } else if (withdraw > balance) {
            System.out.println("Insufficient Balance!");
        } else {
            balance -= withdraw;
            System.out.println("New Balance: " + balance);
            transaction++;
        }
        break;
    case 4:
        System.out.println("Total Transaction: " + transaction);
        System.exit(0);
        break;

    default:
        System.out.println("Invalid input, try again");
```

Sample Execution:

```
> Terminal
> ATM MENU
  1. Check Balance
  2. Deposit
  3. Withdraw
  4. Exit
  Enter your choice: 1
> Current Balance: 8000
> ATM MENU
  1. Check Balance
  2. Deposit
  3. Withdraw
  4. Exit
  Enter your choice: 2
> Enter deposit amount: 500
> New balance: 8500
> ATM MENU
  1. Check Balance
  2. Deposit
  3. Withdraw
  4. Exit
  Enter your choice: 3
> Enter withdrawal Amount: 1500
> New Balance: 7000
> ATM MENU
  1. Check Balance
  2. Deposit
  3. Withdraw
  4. Exit
  Enter your choice: 4
> Total Transactions: 2
```

Short Explanation.

This simple ATM menu uses a while loop to continuously get input from the user. It starts with a menu selection of 4 operations to choose from: Check Balance, Deposit, Withdraw, and Exit. After receiving an input from the user, the code proceeds to the switch case function to determine what function to use. The if-else statements are used to ensure that when withdrawing, the amount should not exceed 2000 or the current available balance. After the user is done with the transactions, the terminal will show the amount of transactions using the variable int transactions.
