```
import java.util.Scanner;

public class StudentAgeAnalyzerBiaco
{
    public static void main (String [] args)
    {
        Scanner input = new Scanner (System.in);
        System.out.print ("Enter the name of the student: ");
        String name = input.nextLine();
        System.out.print (" enter the age of the student: ");
        int age = input.nextInt();

        System.out.println (" The name of the student is " + name);
        if(age ≤ 12) {
                System.out.println ("The student is a CHILD.");
        } else if (age ≤ 19) {
                System.out.println (" The student is a TEENAGER.");
        } else if (age ≤ 59) {
                System.out.println (" The student is an ADULT.");
        } else {
                System.out.println (" The student is a SENIOR CITIZEN.");
        }
    }
}
```
